Methodology

Tier A - OTP should be tested (if not tested - detier to SP subtier), working and set below 200°C (if it's set higher - detier to LP subtier), required to be based on ZVS primary topology (LLC or phase shift resonant), have ripple below 50mV under all load situations up-to 110% overload, <=3% transient response on 12V rail, <=3% 12v voltage deviation from nominal. Fan with =>30k hours MTBF at 40°C (generally non-plain-sleeve bearing) or be fanless. All capacitors rated for 105°C. Minimum 18AWG gauge wires for hot 12V leads on GPU/EPS/ATX cables, on pig-tail cables - at least to the first connector, 20AWG to the second or for ground leads.

ATX 3.0 subsection requires an Intel DB entry or third party power excustion tests.

Tier B and above - required to have OTP (just claimed is enough, but if it's tested and the unit did not survive - detier to LP subtier), to have OPP and OCP tested (detier to tier C if failed), be based on ACRF or ZVS primary, DC-DC secondary topology, and have APFC with full VAC input range (100-230V); voltage regulation and ripple should be in spec under 110% overload; 12V ripple below 100mV under 110% overload; should be rated for continuous operation at minimum 40°C ambient (not just 'operating conditions' but unless proven to not qualify by testing, only claimed operating conditions without continuous operation remark is enough)

Tier C and above - required to have independent regulation on all rails and/or <5% min to max voltage regulation on all rails under extreme crossloads and high combined load; ripple on 12V rail should be below 100mV under extreme crossload and high combined load situations and up-to 100% load.

Tier D and above - required to have OPP claimed; requires OCP on minor rails tested, SCP on all rails tested, UVP, OVP on all rails claimed (or a teardown showing that supervisor IC supports that), ripple within specs, voltage regulation in specs on all rails under moderate crossloads and 100% load

Tier E - units expected to be qualifying for no higher than tier D but without reviews or reliable information on, or otherwise having characteristics or issues keeping them from being placed on the same tier as better tier D units, or otherwise, units there are too little information on to be reliably tiered

Tier F - heavily malfunctioning protections, QC issues or design flaws leading to widespread malfunctions / DoAs

There's one allowed exclusion for test point not passing tier requirements for ripple, load regulation or transient response without detiering.

Subtiers:

- <u>Normal priority</u> direct reviews with transient response and protection tests (OCP, OPP, plus OTP for tier A), and sufficient for tier B and lower only a teardown confirming highly similiar component choices
- <u>Low priority</u> direct reviews without protection tests (for tier B and lower) or due to minor issues with the tests
- <u>Speculative position</u> units with barely sufficient info on. Meaning at least primary and secondary topology is known. But tier A requries either a full teardown to confirm high similiarity with the unit from normal priority or a Cybenetics with a components breakdown report available.

Gold - Best units in the tier, requirements :

- <u>Tier A</u>: <=1.5% 12V peak to peak, <=2% transient response on 12V rail, <=3% deviation from nominal 5V rail, <=30mV max ripple on the 12v rail(s) including 110% load tests, transient response within ATX spec on 5V rail. One exception allowed for test data point outside of required range. Minimum 18AWG cable gauge for hot 12V leads. Includes requirements for blue color (quiet operation).
- <u>Tiers B & C</u>: mostly based on review availability, objective quality and performance compared to competition in the same tier to highlight the most important models in respective price ranges

Blue - Quiet operation, meaning sub 30 dBa (35 dBa for SFX units) under moderate load i.e :

- 300W at 12V rail for <=500W units
- 400W for 550-700W units
- 500W for =>750W units (30-50W load on minor rails).

Additionally, for tier A units, sub 35 dBa (45 dBa for SFX units) under 70% load for =>850W units (30-50W load on minor rails), and sub 20 dBa under low load (idle), i.e 100W at 12V rail and 15-20W load on minor rails.

Stock or after manual configuration using software or fan mode switch button.

Colors priority : Gold > Blue

pending revision (WIP) Todo: Add Sentey units Look into Zalman and FSP mess of a lineups Look into moving problematic LLC resonant units from tier C to tier B LP/SP Require OTP only for tier B proper, moving no OTP units to B LP Clean-up tier B, move units without teardowns to SP, without any proper reviews on the platform to tier C Decide what to do with SAMA built units Add gold/blue colors to lower tier SFX units Move a requirement for full range input voltage operation to tier B proper, i.e 230V units go no higher than B low priority Added: - tier A Seasonic Prime TX 1600 ATX 3.0 - tier B SP Chieftec Polaris 3.0 - tier E All Inter-Tech units Moved: - tier B SP to A proper Vetroo GV/G5 1000 TT TP GF3 ARGB revision 17.0g (2013-04-11) Misc: Add a note about Bitfenix Whisper M / Formula Gold 450/550W rail config Added: - tier A LP Cougar GX-F - tier A speculative XPG Core Shift 1000 - tier B speculative TT TP GF A3 Chieftec Polaris Pro (add a remark for non-Pro) **EVGA GE** Moved: - from tier A SP to tier A proper ASUS Loki [blue] FSP Hydro Ti [gold] - from tier B speculative to B proper TT PF1 =>1050W Color: - to white Seasonic Prime PX/GX 1000-1300

High Power Performance GD

ASUS TUF Bronze

Renamed:

Add '[HP1-J-GD-F12S]' to HP Performance GD

revision 15.0 (28 Oct 2021)

Methodology changes:

Move requirement for reviews with protection tests from tier A gold color to regular tier A normal priority

Add moderate crossloads and OCP, SCP protection tests requirement for normal priority tier D. In result all tier D units except Corsair VS,CV and Gigabyte P450/550B are moved down to low priority subtier.

Other changes:

Move outdated/obsolete units and rare/obscure units from the main tier list to spreadsheet's 'Units Index' tab

Remove mentions of OCZ

Add footnote for 230V-only units, move to low priority

Add footnote for C14 versions of AX1600i

Add tier F for total bombs

Remove gray color (again), either move such units to low priority or lower tiers or remove altogether

Move most group regulated units to tier E except those worth recommending over the rest

Fixes:

Remove tier A LP bgt DP12

Remove 'no 12V UVP' part from the S12III footnote

Aerocool Cyclon to Cylon

Change 'sub 90VAC' to 'sub 100VAC' in GPX footnote

Remove tier D EVGA G5

Move down from tier A due to the new requirement for detailed reviews :

revision 13.1 (03/06/2020)

Fixed CM MWE V2 Bronze position (tier C to B & B+)

Change Copyleft wording slightly

Renames:

CM MWE V1 - removed wattages, added MPW for White and MPX for Bronze

CM MWE V2 - removed wattages, added MPE for both White and Bronze

Removed:

CM MWE V2 Bronze 230V only - no such SKU

revision 13.0 (26/05/2020)

Updated methodology

Merged tier S and tier A+ units into tier A under multi-rail subcategory

Added Gold color to signify the best units inside a tier, see requirements in the methodology

Added Gray color to previously italics marked units (temporary position) and to mark units with inferior performance (which still qualifies for a tier), known issues or for which there are not enough data to recommend it confidently

Merged most tier A- units into tier A and grayed out, expect for :

HP Super GD, Sharkoon Silentstorm Cool Zero, InWin PB - OTP claimed, assumed working

TT Grand RGB Gold (Sync) - moved to tier B, OTP doesn't work reliably

SS Strider Platinum <=850W - which isn't Enhance 1300GT

XFX XTR =>850W - which isn't Seasonic G

SS Revolution SFX - sleeve bearing, moved to tier B+ (fan controller issues)

Antec EA Plat - group reg, duplicate with tier D entry, removed

Added units:

tier A multi-rail:

Enermax - Platimax 1200/1350W

LEPA - MaxPlatinum

Seasonic - SSP-RT

tier A single-rail:

Abkoncore - CR Platinum

Corsair - AX Gold (in addition to 1200W)

FSP - Hydro PTM Pro Gamdias - Cyclops X1

Green - Overclocking DG, EVO, High Performance+, UK+

InWin - A1 Plus

LC Power - LC Platinum

LDLC - GT-P, XT-P, QS-FL, QS-FLP, QS+, US-G, BQ+

Rosewill - Capstone -XXX/-XXXM/-1000-M / G <=750W

Seasonic - X Gold, SSP-SFG / SSP-SUG, Prime Fanless PX

Sentey - Golden Steel GSP-HM 1200W / GSP-HM V2 1050W

Silverstone - SX-G <=500W, SX-PT, Nightjar / Nightjar SFX-L

Thermaltake - Toughpower iRGB Gold, DPS G Gold

added more noise ratings	
revision 9.0 (12-02-2020)	
added noise ratings, with more to come in the future	
changed digital to manual multirail OCP	
revision 8.1 (11-02-2020)	
moved MWE v2	
revision 8.0 (06-02-2020)	
fixed seasonic focus PX	
added XPG Core Reactor	
updated some thermaltake links	
updated tier description	
revision 7.3 (31-01-2020)	
fixed Pro Black FM	
revision 7.2 (29-01-2020)	
· 	

split up m12ii platforms	
changed name on hyper m85	
onanged name on rippor mos	
<u>revision 7.1 (21-01-2020)</u>	
moved ROG Strix	
moved project 7	
revision 7.0 (19-01-2020)	
TOTION TO TO TO EXCEPT	
added BR	
added tier D+ notes	
added source to APGM	
revision 6.10 (13-01-2020)	
added enermax maxtytan	
audeu enemax maxiyian	
<u>revision 6.9 (07-01-2020)</u>	
moved Riotoro Enigma G2	
added some links	
moved g5	
revision 6.8 (03-01-2020)	
<u>16VISIOII 6.0 (03-01-2020)</u>	
moved all cwt gps units except formula down due to lack of otp	
<u>revision 6.7 (01-01-2020)</u>	
temporary set all cwt gps units except formula	
removed link on g1	
Terroved milk on gr	
Pov 6 6 (27 42 40)	
Rev 6.6 (27-12-19)	
updated gigabyte apgm	
temporary set dqst	
added supremo m2	
moved supremo I2	
Pay 6 5 (24 42 40)	
Rev 6.5 (21-12-19)	
Put all focus based units in estimated position	
put all focus based units in estimated position	
put all focus based units in estimated position Rev 6.4 (16-12-19)	
put all focus based units in estimated position Rev 6.4 (16-12-19) added high current gamer extreme	
put all focus based units in estimated position Rev 6.4 (16-12-19)	
put all focus based units in estimated position Rev 6.4 (16-12-19) added high current gamer extreme added Gamdias Kratos	
put all focus based units in estimated position Rev 6.4 (16-12-19) added high current gamer extreme	
put all focus based units in estimated position Rev 6.4 (16-12-19) added high current gamer extreme added Gamdias Kratos	
put all focus based units in estimated position Rev 6.4 (16-12-19) added high current gamer extreme added Gamdias Kratos	

changed txm 2017 name set position for focus 2019, based off amp review Rev 6.1 (26-11-19) split up GQ fixed RM 2019 link Rev 6.0 (25-11-19) added tier D+ added neo eco gold, high current gamer gold Rev 5.2 (24-11-19) added thermaltake smart m added silentiumpc supremo I2 separated cx/cxm added a couple links Rev 5.1 (22-11-19) added some gigabyte units added riotoro enigma bronze Rev 5.0 (14-11-19) added sheets for methodology Rev 4.1 (12-11-19) put hyper/hammer in italic position added sources Rev 4.0 (10-11-19) added pcpartpicker links to units added prime/x fanless removed notes because pcpartpicker shows the difference added back colors because copying over didn't go 100% perfect Rev 3.0 (8-11-19) added revolt X added hammer/hyper added bh added ion+ moved photon added digital marks updated on inrush current limiting moved differences to notes

List of notes on grayed out units: Tier A: Abkoncore CR Platinum - no reliable reviews (Andyson R1200) Abysm Morpheo - no reliable reviews (Segotep KL analog) Aerocool P7 - fan controller failure reports, presumably just a few batches Antec HCG Gold & Extreme pre 2020 - trips with AMD Vega (Seasonic Focus) Antec Truepower Classic & Edge <=750W - trips with AMD Vega (Seasonic G) Asus ROG Strix pre 2020 - trips with AMD Vega (Seasonic Focus) Bitfenix Formula Gold & Whisper M <=550W - trips with AMD Vega (Seasonic G) Chieftec Powerplay Gold - bearing noise issues CM MW Maker - OOS 5VSB on high combined load, power-good problems CM V-Gold 2018 =>750W - lackluster performance, no surge protection Corsair HX Gold 650W - trips with AMD Vega (Seasonic G) Corsair SF - https://forum.corsair.com/v3/showthread.php?t=197081 Delta GM - no reliable reviews (Antec HCP Plat.) Delta GPS-HB - no reliable reviews EVGA G3 - OOS on overload before OCP & OPP EVGA NEX-G 1500W - OOS 5VSB on high combined load FD Edison M - trips with AMD Vega (Seasonic G) FSP Hydro PT - no reliable reviews (PTM based) Gamdias Kratos P1, Cyclops X1 - no reliable reviews (Andyson H6, R1200) Gigabyte XP1200M - trips with multi-GPU setups (Enhance 1300GT) GW E Gold - no reliable reviews Huntkey MVP Gold / Plat. - trips with AMD Vega (Seasonic Focus) InWin A1 Plus Gold - no reliable reviews (High Power #810, Andyson H6) Kingwin Stryker - no reliable reviews (SF Golden Silent) LC Power Platinum - no reliable reviews (Andyson R1200) LDLC all units - FDB fans not confirmed LDLC GT-P, QS+ - trips with AMD Vega (Seasonic Focus, G) Micronics Astro Platinum - no reliable reviews (HP #800) Phanteks Revolt Pro <2020 - trips with AMD Vega (Seasonic Focus) Riotoro Builder 1200W - 105% OPP Riotoro Enigma G2 pre 2020 - trips with AMD Vega and other high transient GPUs Rosewill Capstone - Lack of protection info SAMA - no reliable reviews Seasonic Focus Gold, Plus Gold, Plus Plat., G, S12G - trips with AMD Vega and other high transient GPUs Seasonic SSP-RT - trips with AMD Vega and other high transient GPUs (Seasonic G) Seasonic SSP-SFG, SSP-SUG - no PCI-e power cables, no reliable reviews SF Leadex III pre 2020 - OOS on overload before OCP & OPP Sharkoon Silentstorm Cool Zero - no reliable reviews Silverstone Strider Plat. =>1000W - trips with multi-GPU setups (Enhance 1300GT) SPC Supremo FM2 - too few reliable reviews (SAMA)

TT TP Grand Plat. - trips with multi-GPU setups (Enhance 1300GT)

XFX TS Gold, XT Gold, XTR <=750W- trips with AMD Vega (Seasonic G, Focus)

XFX XTR2, XTS2, XTI - no reviews

List of notes on grayed out units :
Xigmatek Hera Gold - no reliable reviews (Andyson PAD07)
Xigmatec XFP - no reliable reviews (High Power #800)
Zalman Acrux Plat trips with multi-GPU setups (Enhance 1300GT)
Tier B:
Tier C:
Cougar CMX v3 - 50mV 5VSB ripple at 110% load
Mistel MX Gold / Plat new OEM
Rosewill Photon =>850W - almost OOS 12V rail ripple at 100% load
Rosewill Fortress - soldering issues (ATNG)
Silverstone SX-G =>600W 3.3V ripple at 100% load is out of spec

List of units not fitting higher tiers for reasons other than primary/secondary topology and protections (OTP still noted for later checking):

units on the same row share platforms

Trips with high-transient GPUs like AMD Vega:

Seasonic Focus FX/FM/PX v1 based units - pre 2020 Antec HCG Gold / EA Pro / NE Gold, ROG Strix, Phanteks Revolt Pro, Riotoro Enigma G2

Seasonic G based units - Seasonic SSP-RT / S12G RT / G RM, XFX TS Gold / XTR <=750W, Antec True Power Classic / Edge <=750W, Corsair HX 650 (only), FD Edison M, LDLC QS+

SAMA Armor / Forza based units - SPC Supremo L2/M2/FM2, Vinga VPS-G, VIVO 24k, Modecom Volcano, NOX Hummer X Gold, iTek GF

bg! PP10/11 400W (only one 24A rail for GPU)

From A to B+, <=50mV ripple or <=3% load regulation at <=110% load or CL1/2:

Corsair CS-m, Riotoro Enigma, LC Power GP4 / Arkangel III

Corsair TX-m Gold

CM MWE / Reactor Gold, Xilence Performance X

Corsair CX, Riotoro Onyx

old Cougar GX-S

CWT PUO - Deepcool Quanta, Chieftec Navitas GPM-C etc.

Silverstone Strider Titanum <1500W

PCPC Silencer MKIII

Seasonic S12G

Enermax Modu87+ / LEPA G-MA <=1200W

Enermax Platimax 750-1000W,1500W / LEPA G-MA 750-1200W

SS Strider Titanium <=800

Silverstone Strider Platinum PTS

bq! SFX-L Power

SS SFX ST-SF-G

Rosewill Tokamak

Andyson H6

LC Power Arkangel 3 LC8850III

EVGA GS <=650W

TT TP DPS G RGB Gold

Xigmatek Vector P

HP Astro GD-F HPJ =>850, Zalman EBT =>850, Rosewill Photon =>850, Kolink Continuum 1000-1200, Sentey Golden Steel 1050

From A/B+ to B, lack of OTP (add 'confirmed' if so) :

Thermaltake Grand Gold (TPD-M)

ThunderX3 Plexus

Vinga VPS Gold

Vinga VPS Platinum / IPPON Platinum

SPC Supremo L2/M2

Rosewill Capstone G =>850W

Powerspec PSX-GFM

Powerspec PS-GSM/GFM

ADX Power W

Rosewill Tachyon

TT Grand RGB Gold

TT Grand RGB Gold Sync Ed.

TT Grand RGB Platinum

InWin C900

SF Golden King / Sentey Platinum

Seasonic G GP / SSR-GP / SSR-GT

Montech Gamma (II)

From A to B+, sleeve bearing fan:

Chieftec Polaris

Modecom Volcano Gold

Vinga VPS-G 550W

Antec EA Gold Pro / NE Gold

1stP Steampunk

EVGA B3

SS SX-LG, Chieftec SFX-GD-C, Sharkoon Silentstorm Gold SFX (and >50mV ripple)

LianLi PE

SS ST-SF Bronze

SS SX-LTI

Antec NE Zen Gold

Abkoncore Tenergy Gold

Xilence SQ

From A to B+, unknown bearing fan:

Gamdias Kratos P1

Rampage Everest ETX / FTX

NOX Hummer X Gold

Segotep GP-G/GP-P/GP-T/ZP/KL (DWPH EFS-12E12L / EFC-14E12D)

HP Performance GD

Rosewill Lepton

Hunters Titan TF

ADX Power W

Skydigital Power Station 5 Gold 850/1350W

Fan notes:

PowerYear S-F - FDB : Xigmatek Hera Gold

Corsair NL135 - Matsushita FDB: Corsair RMi

Other:

Corsair RM1000 2013 (CWT) - out of spec ripple on 3.3V, >100mV ripple on 12V in one review, 70mV ripple on 12V 100% load and 100mV ripple CL1 in other two (Aug 2014 Aris review)

Gigabyte AP-GM - abnormally high ripple in one review, 11 to 77 mV at 12V, 18 to 53 mV at 5V from 100% to 110% load

High Power HPM platform seem to perform worse in older revisions (pre 2015), units based on it are Zalman EBT <=750W, TT TR2 Gold, SS Strider Gold S V2, early batches of new Courgar GX-S too probably (X50W), but since Cougar GX-S and SS Strider Gold S V2 perform good we can expect this from other units too assuming they're new enough

Seasonic S12II Bronze / M12 (Evo) X20W - no 12V UVP

FSP Aurum based units - bad crossloads and high ripple - tier D

Multi-GPU setups tripping - Enhance 1300GT based units (Zalman Acrux, SS Strider Platinum =>1000W, TT Toughpower Grand Platinum, Gigabyte XP-M 1200)

Fan controller failure/issues - Aerocool P7, Enermax Revolution SFX

Too low OCP/OPP - Riotoro Builder 1200W

Too few thorough reviews - Abysm Morpheo, Delta GPS-HB, Gigabyte G750H, Greatwall E, SAMA based units (SPC Supremo, Vinga VPS, Nox Hummer X Gold)

Out-of-spec before protections kick in (>110% load) - EVGA G3, Seasonic Focus pre 2020, FSP Dagger Pro Fan noise issues or generally very loud - Yate Loon ball bearing (Chieftec Powerplay Gold, Gigabyte GH), Corsair TXm, SF Leadex II

Lackluster performance / build quality - CM V 2018, VSM ?, SPC Supremo L2/M2, TT Smart DPS G Gold Low-tier capacitors - Corsair RM 2019

Quality considerations (i.e newcomer or some reports of QC issues) - Mistel units

Inconsistent performance across multiple revisions - SF Leadex III ?

OTP claimed but possibly not working - TT Grand RGB Gold / Grand RGB Gold Sync Ed. / Grand RGB Platinum, InWin C900

>100mV ripple - CM MWE V2 Bronze

>120mV ripple - CM MWE V2 White, SS Strider Titanium =>1100 (should be fixed in new batches judging by Kolink Continuum 1500W), High Power HPA (HP Astro GD (non-F), SPC Supremo M1 Plat)

Out of spec regulation on high combined load - SS Strider Gold Evo, Enermax Platimax 500/600W, Zalman LX, Aerocool Strike-X =>800W

No OCP on minor rails - SAMA Armor Bronze (SPC Supremo Vero L2/M2, Vinga VPS Bronze, Nox Hummer X Bronze, Modecom Volcano Bronze)

Enermax Platimax 850W platform - >80mV ripple on earlier batches (two reviews)

>100mV ripple under 105-110% overload - TT TP SFX

High ripple on low load - CM V Gold 2018 650W

Out-of-spec on 5VSB at 100/110% load

Silverstone SX-LPT 700 - unreliable or not working OPP (Aris review, although it works in SS own tests), fan controller problems / misconfiguration (JG, AnandTech)

5VSB out of spec - CM MW Maker, EVGA NEX 1500G

EVGA G5 - high ripple in Aris review from 2019 on 1000W version, either one off or fixed as Cybenetics report from 2020 is fine

Antec EA Pro Gold - two versions (with one probably Chinese-exclusive) on completely different platforms, one on Seasonic LLC+DC-DC (Focus) and another on FSP ACRF group regulated platform

EVGA W1 - Unable to handle 110v AC with higher loads, leading to failure of the unit

- [1] not tier B because 230V only
- [2] Doesn't qualify by ripple and 85°C main cap
- [3] close to be quiet! Straight Power 11 Gold
- [4] scroogemcduck.jpg
- [5] Too many reports of problems with Ampere despite Jon haven't confirmed it on AX 1000W
- [6] 103% OPP/OCP, i.e underrated compared to competition and has possibility of tripping with high-transient hardware.
- [7] New revision, group reg High Power
- [8] China only
- [9] assumption since there are no protection tests but third party advisor assures that all protections are there
- [10] 18AWG in pig-tails
- [11] 18AWG in pig-tails
- [12] 18AWG in pig-tails
- [13] 18AWG in pig-tails
- [14] 18AWG in pig-tails, 16AWG at 850/1000W
- [15] 18AWG in pig-tails
- [16] status unclear
- [17] Not TPK
- [18] Appears to be a costdown (80+ Bronze) of CWT GPX
- [19] concern over Helly's QC, wait for more user feedback to accumulate: https://linustechtips.com/topic/1363076-new-lian-li-sp-750-destroyed-pc-components/?tab=comments#comment-14918342
- [20] Doesn't pass 40°C burn-in
- [21] bearing noise
- [22] Over the concern of MSI using DBB fans in some regions/batches
- [23] Different platform, no reviews
- [24] Different platform, no reviews

- [27] FSP Hydro PTM Pro

- [28] Sirfa #800, no OTP
- [29] Based only on shots provided on manufacturer site, 800W is unknown High Power platform, 550/650/750/850W are unknown OEM presumably with DC-DC
- [30] CWT GPX
- [31] Great-Wall something, possibly Corsair CX modified
- [32] SANR ~ Aero Bronze
- [33] No confirmation on 12V UVP
- [34] CWT GPM
- [35] FSP ACRF group-reg
- [36] OTP not present, Jon asked CWT
- [37] no OCP at all, -Stefan
- [38] OTP present, Jon asked CWT
- [39] No confirmation on minor rails OCP and UVP\OVP on 12V
- [40] 12V and 5V aren't independent regulated
- [41] DC-DC, after all
- [42] One review with not working OPP (Silverstone), no other reviews with OPP otherwise
- [43] Several revisions with unknown changes
- [44] Non-full range
- [45] I guess it was supposed to be 'XFX ProSeries Core Edition, aka XFX TS Bronze'
- [46] Forgot to un-gild after moving from tier B to A, it's too loud
- [47] Probably confused it's platform as LLC?
- [48] Probably confused it's platform as LLC?
- [49] To appease baloca smh my head
- [50] PlugLoad / ECOVA / 80 Plus or Cybenetics / ETA certification if present (higher priority):
- N No certification
- W 80+ Standard
- B 80+ Bronze or ETA Bronze
- S 80+ Silver or ETA Silver
- G 80+ Gold or ETA Gold
- P 80+ Platinum or ETA Platinum
- T 80+ Titanium or ETA Titanium
- D ETA Diamond

[51] Form factor standard:

ATX (PS/2), SFX, SFX-L, TFX, 1U, 2U, Flex(ATX), Other (with note, i.e Pico, PS/2 redundant, ATX PS/3 etc.)

[52] Tier and subtier/color according to methodology

'+' suffix - gold color

'-' suffix - low-priority subtier

'*' suffix - speculative position subtier

N - not tiered, no info

X - not tiered, long out of production or limited run

Positions may be not up-to date with the tierlist article

[53] [W] - wattage

[C] - country code

[XX] - For EVGA, warranty code

[54] For 100% continous load

[55] Current worldwide warranty in years

[56] Primary:

PFC:

TP - Totem Pole

BL - Bridgeless

SBL - Semi-Bridgeless

FB - Full Bridge

I - Interleaved

Conversion:

DF - Double Forward

ACRF - Active Clamp Reset

Forward

LLC - LLC resonant

PSR - Phase Shift Resonant

Secondary:

Regulation:

GR - Group Regulation

DMA - Dual Magnetic Amplifier

DC-DC - duh

Rectification (12v):

PR - Passive Rectification

SSR - Semi-synchronous

SR - Synchronous Rectification

Misc:

DSP - digital signal processor (sec. side)

- [340] #810
- [341] So likely OEM version of Super GD

[342] #781

[343] Presumably #817

[344] 750/850W version of CWT GPX platform potentially can't work at 90VAC for prolonged periods (-10% off minimum 100VAC input voltage, i.e in brownout)

[345] 400/500/600/700W

[346] 750/850W version of CWT GPX platform potentially can't work at 90VAC for prolonged periods (-10% off minimum 100VAC input voltage, i.e in brownout)

[347] 550/650/750/850/1000W

[348] 750/850W version of CWT GPX platform potentially can't work at 90VAC for prolonged periods (-10% off minimum 100VAC input voltage, i.e in brownout)

[349] 750/850/1000/1200W

[350] Fan grille with islands above the fan hub and for fan mounting holes. 120mm fan

[351] Fan grille without island above the fan hub. 140mm fan

[352] 650/750/850/1000W

[353] NP-1PM-E500A NP-1PM-E650A NP-1PM-E850A

[354] #761

[355] #761

[356] #636

[357] ETASIS, really

[358] #690

[359] #771

[360] 750/850W version of CWT GPX platform potentially can't work at 90VAC for prolonged periods (-10% off minimum 100VAC input voltage, i.e in brownout)

[361] 450/550/650/750W

[362] 550/750/850/1000W

[363] 1000W 7 years others 5 years

[364] 850/1000/1200W [365] #761 [366] #771 [367] 850/1050/1200W [368] 850/1050/1200W [369] 850/1050/1200W [370] 850/1050/1200W [371] 450/550/650/750W [372] 40°C at 100% load, 50°C at 80% load [373] 500/550/650/750/850W [374] 550/650/750/850/1000W [375] 550/650/750/850W [376] 650/750/850/1000/1200W [377] 40°C at 100% load, 50°C at 80% load [378] 650/750/850/1000/1200W [379] 650/750/850/1000W [380] 650/750/850/1000W [381] 850/1000/1300W [382] 1.6k at >115VAC, derating to 1.3kW at 100-115VAC [383] 650/750/850/1000W [384] 1.6k at >115VAC, derating to 1.3kW at 100-115VAC [385] 750/850/1000/1200W [386] 750/850/1000/1200W [387] 750/850W version of CWT GPX platform potentially can't work at 90VAC for prolonged periods (-10% off minimum 100VAC input voltage, i.e in brownout) [388] 650/750/850/1000W [389] 650/700/800/850W [390] 400/500/600/700W

[391] Center of the fan grille with the Silverstone logo, fan is mounted almost in the center, 150mm depth

[392] Center of the fan grille with the Silverstone logo but fan is mounted slightly off-center, 140mm depth

[393] Center of the fan grille with four holes around x-shaped indent, 140mm depth

[394] Center of the fan grille with four holes around x-shaped indent, 140mm depth

[395] 550/650/750/850W

[396] Blue fan

[397] 1100/1300/1500W

[398] 230V voltage input with rated power, Full-range with -100W power derating

[399] Black \ White

[400] White exterior

[401] Black exterior

[431] /bad Great Wall

[432] Do not edit.

Values calculated automatically from raw min/max v.reg data. In basis points (1/10,000 or 1/100 of percent)

[433] Signed.

All load tests, 10-110%, CL1, CL2, low and very-low load.

[434] ~20W minor rails load range, >20W 12V, don't bother if graph is flat, OOS for out-of-spec

[435] basis point \ permyriad (1\10,000), worst value

[436] All load tests, 10-110%, CL.

Both from table and graph, maximum value, peak-to-peak, decimals not important

[437] Noise (dBa) at blue color requirements: total load 400W for 550/650W units, 500W for =>750W, 800W for >=1000W units and 30-50W load on minor rails.

Data from colored chart.

[438] Difference between peaks In basis points.

[439] Maximum deviation from nominal value (12V, 5V, 3.3V) In basis points.

[440] place '>' before value if it's too high, i.e voltage regulation or ripple goes out of spec

place 'NT' to denote an untested value

[441] Y for presentX for not present (list tested range)O for not testedsecond column - OTP trigger or test range if test wasn't successful

[442] Short Circuit Protection Y for present on all rails N if missing on any rails

[443] Hold up time, ms, don't bother if >17ms

[444] Power-OK signal sequencing:

Y - compilant

N - non-compilant

[445] surge protection:

Y+ - MOV & GDT present

Y - MOV present

N - none

[446] Inrush Current Limiting:

Y+ - NTC & bypass relay present

Y - NTC present

N - none

second column - inrush current value (230V)

[447] minimum if multi-rail, >X value if one exists with OOS characteristics

(c) denotes a configurable OCP

[448] Other 2 units on the same platform (PF1 & iRGB Plat) did trip, batch issue?
